## (54) INFORMATION PROCESSING SYSTEM AND PRINTER USED FOR THE SAME

### (57)Abstract:

**PURPOSE:** To enable high-speed print processing without performing unnecessary emulation switching processing on the side of a printer when the printing processing is performed on the printer on which plural kinds of emulation are mounted as to the information processing system and the printer used for the system.

**CONSTITUTION:** To transfer print data to the printer on which plural kinds of emulation are mounted, active emulation currently set to the printer is inquired of the printer and active emulation information on the printer is obtained from the printer (S7); and then the obtained active emulation is compared with the emulation of print data for transmission and only when they are not equal with each other (NO in 88), an emulation switching command is sent to the printer (S9).
